### **CANTHARIDIN TREATMENT AFTERCARE**

- 1) Leave the band-aid on and do not wash off the medication for 48 hours
- 2) A blister should form during this time
- 3) After 2 days, you may wash the area with soap and water
- 4) AFTER washing, you may pop the blister to relieve pain and pressure
- 5) Keep the area clean and use the offloading pads to limit pressure on the tender area
- 6) Apply antibiotic ointment and a band-aid over the wound and pad
- 7) You may take Tylenol or Advil as needed for pain
- 8) You can also ice for 15 minutes as needed to for pain

If no blister forms within 2 days, you can return for a repeat treatment (complimentary).

A few people have severe, fast reactions to this kind of medication. If you have severe burning pain within the first 6 hours, you may remove the bandage early and wash the area with soap and water (and proceed with steps 4-8).

If you have any questions, please contact us.
